Deaths
Since
2016

Over
100
People
Die
Every Day

FACT SHEET

Let's begin by understanding the disease and how our clinic can help. People first need to understand that Opioid Use Disorder is a chronic disease like diabetes, and we believe that being on buprenorphine should carry NO stigma. Being on "Bup" is being in recovery! Our approach is supportive, non-judgmental and low threshold. We also offer recovery meetings and care for underlying psychiatric disorders that complicate addiction.

From the first 30 people to now 600 strong and room for more. (Our numbers speak for themselves!) This obviously works for most people. Our program isn't for everyone, but it does work for those who stick with us.

There are many options for treatment; inpatient / outpatient, a person can choose what works best for them.

Here are some FACTS about our program and treatment:

- Office visits are \$ 200.00 once a month, additional visits as needed in any month at no charge.
- We require a picture ID, insurance card, and we'll take a urine sample.
- If no insurance, we'll help you receive Medi Cal
- The insurance covers the medication cost.
- You are not trading one drug for another. This is a medication, when you are on it, you are in recovery.
- A person must be off of any opiates for at least 12 to 24 hours.
- If transferring from methadone to buprenorphine you must taper down to 30mg or less first.
- If muscling heroin, you must be off for at least seven days. You can smoke heroin to stay well, until induction.
- If you are pregnant, the doctor will assess you and develop a plan with you. It is SAFE to be on buprenorphine during pregnancy.

Transition Clinic doctors and staff.

- Once you are stable, we can discuss a taper if it's right for you.
- Medications offered are: Buprenorphine, Buprenorphine/Naloxone (generic for Suboxone) Suboxone, Bunavail, Zubsolv, Sublocade Inj.
- If you are homeless, ask about our homeless program! You may be eligible for free care.
